

## **Woggle Mobile User Guide**

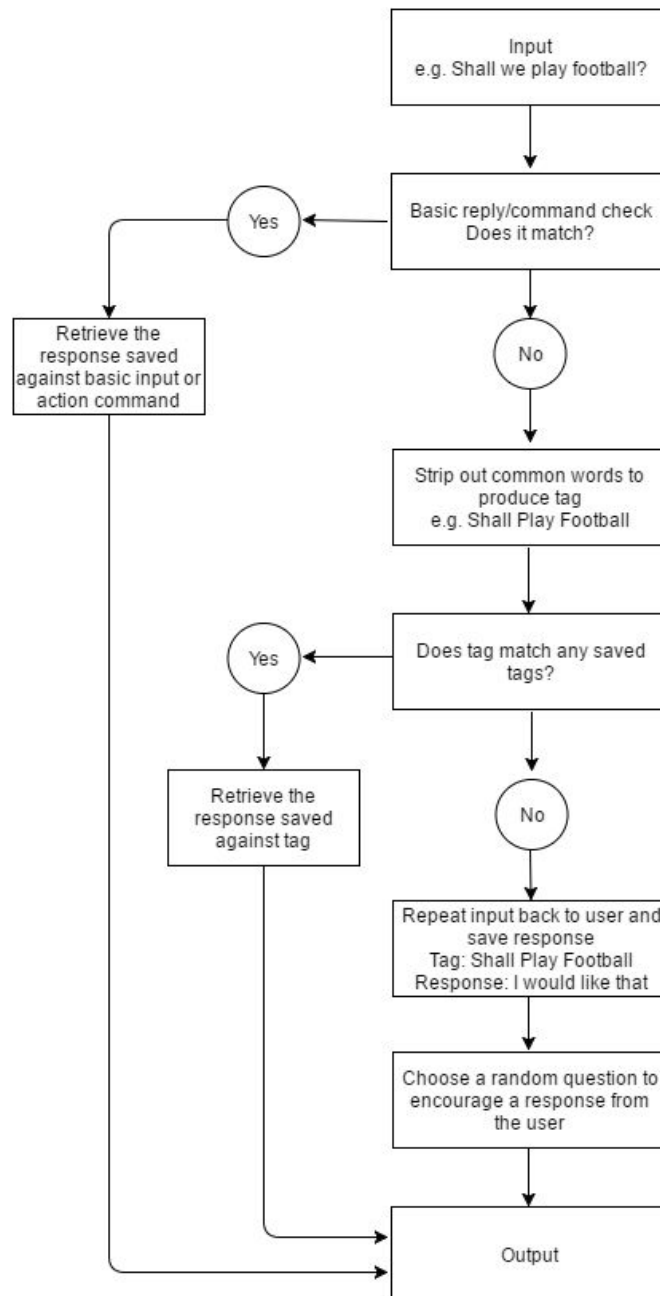

Woggle Mobile takes all the features of the original Raspberry Pi chatbot installation and packages it up to work on mobile devices running the Android operating system.

You can download and install Woggle Mobile for free from [rustyrocket.co.uk](http://rustyrocket.co.uk). If you are feeling confident enough, you can even improve Woggle by tinkering with his code via MIT's App Inventor.

### **Interaction:**

Woggle Mobile is primarily a chatbot with a few added extras, this means that you can be holding conversations with Woggle in next to no time at all. Please remember that to begin with Woggle has very basic vocabulary but this will expand the more you talk with it. To start talking to Woggle all you need to do is press the microphone icon and speak when prompted.

The idea behind Woggle is simple, if you say something it doesn't quite understand (i.e. doesn't have a match for your statement in its database) then Woggle will repeat your statement back to you encouraging you to answer. This way it is able to gauge a more accurate response should something similar be mentioned in future conversations. When Woggle is requesting a suitable response to a statement, the microphone icon will turn red. Press the red microphone icon to record your response.

Commands:

Predict

Ask Woggle to make a prediction and one will be made from a number of random elements. Some make sense, some don't and some may even come true.

Joke

Asking Woggle to tell you a joke will result in you being subject to some of the corniest jokes around.

Fact

If you ask to hear a fact, Woggle will select an interesting one at random.

Story

By asking Woggle to tell you a story, a random short story usually only a sentence or two in length will be read back to you.

#### Radio

Woggle is able to select a random radio station from a list and stream it via your device. "Radio on" is the command to start the radio and "Radio off" is the command to turn it off. Please be careful when out and about using this option as the radio streaming will eat into your data allowance.

#### Question

Start your query with the word "Question", for example "Question, what is the weather going to be like for London?" and Woggle will search the web for the answer. Issuing the command "Close window" will close the web search.

#### Insult

If you ask Woggle to insult you then a suitable insult will be generated at random and read back to you. Please remember it's just a bit of fun.
